PROFILE SUMMARY

I am an aspiring Artificial Intelligence and Data Science student, eager to leverage my machine learning, data analysis, and problem-solving skills in real-world applications. With solid academic grounding and practical project experience, I aim to contribute to innovative solutions while continuously expanding my expertise in the field.

Internship

AI-Powered Full Stack Training Intern

Feb 2026 – Apr 2026

Mevi Technologies (Remote) Bengaluru, India – Currently undergoing structured training in full stack development with exposure to AI fundamentals. – Learning frontend and backend development concepts, database integration, and Python-based workflows. – Working on guided assignments to understand application logic, data handling, and system design Using Django.

PROJECTS

Predicting stock prices using time series analysis

Built a time series forecasting model to predict future stock prices using historical market data. Utilized statistical and machine learning techniques such as ARIMA, LSTM, and Prophet for time series modeling. Performed data preprocessing, including handling missing values, resampling, and feature engineering on stock price data (Open, Close, High, Low, Volume)

Fusion Smart Energy Dashboard | Energy Analytics & Forecasting

Developed an interactive dashboard to analyze and visualize energy consumption across multiple datasets. Implemented forecasting using Linear Regression and performed data preprocessing with feature engineering. Built visualizations and an optimization simulator to estimate energy savings and efficiency.

E-Commerce Recommendation System

Designed and built a hybrid collaborative-filtering and content-based engine with Python, TensorFlow, and Apache Spark, delivering real-time personalized product suggestions via a Flask API integrated into a React front-end. Implemented scalable data pipelines and model serving architecture to enhance user engagement and drive higher conversion across the platform.

TECHNICAL SKILLS

Programming Languages: Python, HTML, CSS, JavaScript, PHP.

Frameworks & Libraries: OpenCV, PyTorch, Pandas, NumPy, Matplotlib, Seaborn, React.

Machine Learning & Deep Learning: scikit-learn, PyTorch.

Database Management: MySQL, SQL, MongoDB.

Development Tools: Git, GitHub, Tableau, PowerBI, Jupyter Notebook, Django, VS Code.

CERTIFICATIONS

- **Python for Data Analytics** - Mevi Technologies LLP (45 Hours)
- **Communication Skills & Personality Development** – KSSEM
- **Data Analytics Master Class** – NoviTech R&D Pvt. Ltd (Aug 2025 – Sep 2025)
- **Generative AI Literacy** – Future skills prime (Aug 2025)

EDUCATION

K.S. School Of Engineering and Management

B.E in Artificial Intelligence and Data Science | CGPA:6.8

DEC 2022 - 2026
